

Overview:

RARITAN

Raritan® simplifies IT operations with highly reliable and responsive solutions that monitor the health and vulnerability of servers and other equipment, as well as troubleshoot, access, and repair faults from anywhere, at any time. The company's monitoring and management appliances and access and control solutions—including Keyboard, Video, Mouse (KVM) switches, serial console servers, network and systems management, and remote connectivity products—help administrators improve service uptime and staff productivity. And the CommandCenter® Service Management Architecture integrates systems, network, and proactive security monitoring with secure, remote, in-band, and out-of-band server and device access to help you identify problems before they impact service levels—and fix them without leaving your chair.

Raritan

Solutions:

Raritan's Service Management Architecture, including CommandCenter management products and traditional access and control solutions, helps IT administrators identify and fix problems before they affect service levels.

CommandCenter Secure Gateway, Raritan's centralized access gateway appliance, consolidates in-band access tools with Raritan's remote access solutions, plus the servers and other IT devices connected to them.

CommandCenter NOC provides availability and performance monitoring, asset management, traffic analysis, and important security features in an easy-to-deploy appliance.

Dominion KX is a secure, enterprise-class digital KVM switch offering BIOS-level access and control of up to 64 servers over IP with multiuser access.

Dominion KX101 is a cost-effective, single-port, palm-sized device that ensures authorized users nonblocked KVM access to a target server.

Dominion SX is a secure console server with SSH and Web-based access for monitoring and controlling between 4 and 48 serially managed devices over IP.

Dominion XRO and KSX are all-in-one solutions for managing remote office equipment, integrating KVM, serial and power control with IP, and dial-up modem access.

Paragon II is an enterprise-class, Cat5 analog KVM solution for centralized server management with ultra-high video resolution and nonblocked access to up to 128 servers and IT devices. With Paragon II System Controller, multiple Paragon IIs—and the servers connected to them—can be accessed and controlled with CommandCenter Secure Gateway.

Analog KVM solutions include: **Z-Series™**, **MasterConsole™**, **CompuSwitch®**, and **SwitchMan®**.

Remote access and control products include: **IP-Reach**, **FiberReach® II**, **Cat5 Reach®**, and **Lara® ECO**.
